** Other diameters, ply, arbors available upon request.

CYLINDER AND TAPER BUFFS

STOCK NO.	DIAMETER	DESCRIPTION	PURPOSE
BUCY-1	2	Cylinder	To be used on tapered spindles for buffing the inside surfaces of hollow ware or tubes with no bottom to be polished. Tripoli, rouge or other compounds may be used. The cylinder and taper buffs are the same except in shape. The cylinder buffs have parallel sides and the tapers are shaped like cones.
BUCY-2	2 1/2	Cylinder	
BUCY-3	3	Cylinder	
BUTA-1	2	Tapered	
BUTA-2	2 1/2	Tapered	
BUTA-3	3	Tapered

TAPER BUFF

GOBLET BUFFS

STOCK NO.	DIAMETER	DESCRIPTION	PURPOSE
BUGO-1	2	Round end	To be used on tapered spindles for buffing the insides of mugs, cups, goblets, etc. Used either for cutting or coloring with greaseless compound or set up with glue and abrasive grain. The end of the buff is finished in such a way that the sewing does not come in contact with the work. Square end goblets are available by special order.
BUGO-2	2 1/2	Round end	
BUGO-3	3	Round end	
BUGO-4	4	Round end	
BUGO-5	5	Round end	
BUGO-6	6	Round end	

* Goblets with square ends may be ordered.

Special Buffs (continued)

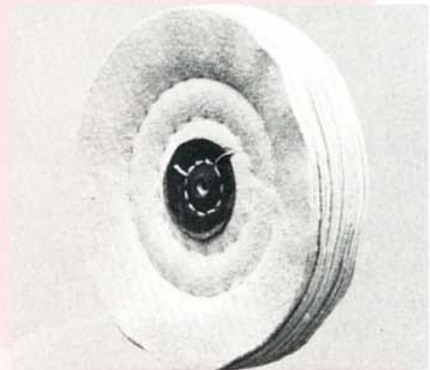

STRING BUFFS (special order)

STOCK NO.	DIAMETER	FACE	ARBOR	PURPOSE
BUSR-3	6	4	1 ¹ / ₄ arbor	String buffs are designed for use with grease base or greaseless compounds and will produce finishes on metal from dull satin to bright "butler." The string ends hold compound better than cloth and their pliable nature enables finishing of irregular surfaces. They are especially useful for satin finishing stainless steel and for blending toolmarks on stainless after fabrication. Special sizes, types and densities available on request.
BUSR-4	8	2	5/8 arbor	
BUSR-6	12	3	1 ¹ / ₄ arbor	

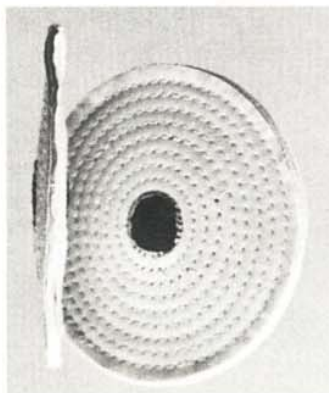

CHAMOIS BUFFS

Chamois buffs are used for buffing and coloring precious metals such as gold, silver, and pewter. They are constructed with high quality chamois skins and are held together with rows of concentric sewing. Chamois buffs come standard with shellac leather centers. Chamois buffs come in diameters from 1-6" and 6 to 18 plys. They are available by special order only and take approximately three weeks for delivery.

RAZOR EDGE BUFFS

Razor edge buffs are often the handiest item in the shop. The tapered form and thin "razor edge" makes it useful for polishing narrow, recessed areas where standard buffs are not applicable. The wheels are built up using various diameters of high grade material with tight stitching. They come standard with 1/4 concentric sewing and leather shellac centers. They are used on tapered spindles and are commonly found in the jewelry and medical/dental industries.

STOCK NO.	DIAMETER	DESCRIPTION	ARBOR
BURE-2	3	86/82 Unbleached muslin	HPH
